

Dear MXM holders,

MaxiMine has officially launched the development of its public chain. This development will entail an upgrade in token address of all existing tokens.

1. What if my tokens are currently stored on an exchange platform?

No need to send the alarm bells ringing. All cryptocurrency exchanges listing MaxiMine tokens will automatically complete the upgrade of token address in a few days. Once the upgrade is completed, users can resume normal trading activities.

2. What if my tokens are currently stored on a cryptocurrency wallet like imToken?

Currently, new tokens have already been issued to all existing token holders in a 1:1 ratio.

MXM 3 (new token issued)

New Token Address:

0x8e766f57f7d16ca50b4a0b90b88f6468a09b0439

Old Tokens (no longer in use)

Old Token Address:

0x6a750d255416483bec1a31ca7050c6dac4263b57

Note: In the imToken 1.0 version, the new token is reflected as “MXM3”. Once the upgrade is completed, the new token “MXM3” will resume its name as “MXM”. In the imToken 2.0 version, both the old and new tokens are reflected as “MXM” so please take note of the respective token addresses.

Alternatively, users can opt to manually remove their existing tokens to avoid confusion between the old and new tokens:

Old Token Address:

0x6a750d255416483bec1a31ca7050c6dac4263b57

And ensure that the new MaxiMine tokens received matches the following token address:

New Token Address:

0x8e766f57f7d16ca50b4a0b90b88f6468a09b0439

Note: MaxiMine tokens will still be reflected as MXM on cryptocurrency exchanges and trading pairs.
